</About Me>

I have a unique blend of data, analytical, and creative skills. I hold a Master's in Business Analytics and a Bachelor's in Information Technology Engineering. Commercially, I have worked in digital marketing, website development, and real estate marketing. Academically, I have studied analytics and data science, learning how to use data to make strategic business decisions and how to engineer software, apps, and databases. In my volunteering, I was the Technical Lead of an entrepreneurship cell, where I held events to promote entrepreneurship.

</Skills>

- Data Storytelling
- Data Visualization
- SQL
- Tableau
- Python
- Excel
- Problem Solving
- Creative Thinking

Experience & Education

MSc Business Analytics,
2024-2025

B.E. Information
Technology, 2021-2024

Jun 2022 - **WEBSITE LEAD & VOLUNTEER**
Mar 2023 **Entrepreneurship-Cell, SAKEC**

I built the cell's website to establish its web presence and produced creative videos for promotional events. I also analyzed event sales data to evaluate vendor performance.

May 2026 -
Present

SALES & MARKETING EXECUTIVE

HEJMO ACCOMMODATION, LONDON

I manage residential property listings and direct digital outreach to match prospective tenants with available rooms. I handle inquiries, coordinate property viewings, and guide clients through tenancy agreements.

Apr 2025 -
Aug 2025

DATA ENGINEER / MSC DISSERTATION

UCL & SENSE WORLDWIDE, LONDON

I developed automated web scrapers to gather community feedback from social media platforms. I designed cost-effective data models in Google BigQuery and created interactive Looker dashboards.

Sep 2023 -
Apr 2024

MACHINE LEARNING TRAINEE

BHABHA ATOMIC RESEARCH CENTRE

I trained and fine-tuned a computer vision model to recognize and automatically sort recyclable objects. I generated synthetic training data and built a graphical interface to calibrate camera measurements.

Apr 2023 -
May 2023

WORDPRESS DEVELOPER

INSPIRUS EDUCATION, MUMBAI

I designed and deployed a responsive WordPress website for educational consulting. I managed page copywriting, technical settings, and local search engine optimization.

Sep 2022 -
Feb 2023

DIGITAL MARKETING EXECUTIVE

BOSTON INSTITUTE OF ANALYTICS, MUMBAI

I launched social media lead generation campaigns to build initial course enrollment for a startup. I also designed customized email templates and automated CRM workflows.

TOM'S BUBBLE TEA SHOP: MARKETING ANALYTICS DASHBOARD

Analyzed marketing strategies, acquisition costs, and customer lifetime value for a new bubble tea shop in **Canary Wharf**. Recommendations include launching a targeted loyalty program exclusively for frequent buyers ('foodies') to maximize retention, and leveraging **Search Engine Marketing (SEM)** to acquire new customers at the lowest possible cost.

Section 1: Customer Acquisition Cost (CAC) Analysis

Acquisition Method	Conversion / Response Rate	Cost Per Acquisition (CAC)
Search Engine Marketing (SEM)	25% of clickers visit the store	£2.00
Targeted Mailing	5% response rate	£14.00
Blanket Mailing	2% response rate	£30.00

SEM is the most efficient channel

Blanket mailing has the highest cost

Section 2: Customer Lifetime Value (CLV) & Loyalty Impact

Customer Lifetime Value

Foodies		Non-Foodies	
Base Purchase Behavior - 8 large drinks/month (£6 each)		Base Purchase Behavior - 4 mid-size drinks/month (£4 each)	
Base CLV	↑ £147.07	Base CLV	£26.54
CLV with Loyalty Program	↑ £173.99	CLV with Loyalty Program	↓ £25.07

Strategic Takeaway:

Tom should implement the loyalty program (a free £4 mid-sized drink after every fourth order) for foodie customers, as it boosts their retention rate to 90% and increases overall profitability. He should avoid this program for non-program for non-foodies, as the cost of the free drink outweighs the benefits of their 75% retention rate.

3: Market Environment (5Cs Analysis)

Company	• A brand driven by Tom's passion for bubble tea, focusing on high-quality ingredients and a wide variety of local flavors.
Customers	• Targeted at both bubble tea enthusiasts ("foodies") and casual buyers ("non-foodies"), specifically young professionals and students in Canary Wharf.
Competitors	• Faces direct competition from established brands like YiFang, T4, Lucky Tea, Heytea, and Chatime, plus indirect competition from coffee shops like Starbucks.
Collaborators	• Growth opportunities exist through partnerships with delivery platforms (UberEats, Deliveroo) and local institutions (UCL).
Context	• The business must adapt to rising social demands for sustainability (biodegradable cups) and health-conscious options (reduced-sugar drinks).

Amazon Prime: ROI Optimization

Analyzed data from a pilot campaign of 10,000 customers. While blanket marketing yielded a negative ROI, targeted machine learning approaches significantly improved profitability, with a decision tree model achieving a 71.9% ROI.

- **K-Means Segment 2:** Yields +25.60% ROI by clustering spending patterns.
- **Decision Tree:** Achieves 71.86% ROI by isolating high-recency and high-frequency customers.
- **Random Forest:** Optimized to 75.56% ROI by reducing tree count to 20 and expanding features.

Campaign Cost & Revenue Mechanics

Cost Per Offer	£1.50 (Mailing & Printing)
Prime 1-Month Revenue	£8.99
Average Product Gross Profit	£12.00 (£40.00 Revenue × 30% Margin)
Amazon-Absorbed Shipping Cost	£6.00
Net Profit Per Converting Customer	£14.99 (£12.00 + £8.99 - £6.00)

The Threshold for Success

$$\text{Break-Even Response Rate} = \frac{\text{Cost Per Offer}}{\text{Profit Per Customer}} = \frac{£1.50}{£14.99} = 10.01\%$$

Baseline Performance

A comparison shows why mass mailing fails to meet the break-even threshold.

Marketing Strategy	Total Cost	Total Net Profit	Campaign ROI
Blanket Marketing	£15,000	£12,561.62	-16.26%

Insight: Mass mailing fails because the natural response rate sits well below our 10.01% break-even barrier. We need smart segmentation.

Social Media Analysis: Data Engineering & Dashboard

Transitioning qualitative data analysis from a **"bottleneck to a breakthrough."** This tool automates the collection and analysis of thousands of online conversations from platforms like Reddit and Quora, converting raw text into actionable strategic hypotheses.

This engineering feat converts raw qualitative insights into structured, data-driven strategy.

The Challenge & Unified Data Strategy

The Technical Hurdle

A major technical challenge was designing a system capable of adding new data sources in the future without requiring a complete system rebuild.

The Solution

I engineered a Unified Data Model that standardizes varying data structures into a single, cohesive format ready for analysis.

Implementation

Using SQL, I created a unified view that standardizes JSON data from distinct sources into a single `unified_social_content_items` schema.

Relational Design

This unified data is linked to ML outputs through a relational schema, connecting content to K-means runs, topic assignments, and UMAP coordinates.

semi-structured JSON data

Data Integration: SQL

Unified BigQuery Table

System Architecture & Engineering

The solution relies on a robust, scalable cloud architecture built primarily on Google Cloud Platform (GCP).

Presentation & Control

Users interact with a custom Control Panel UI in Google Sheets (App Script) to trigger workflows and review social content logs.

Orchestration & Ingestion

Cloud Functions and Pub/Sub orchestrate the pipeline, using Brightdata APIs for extraction.

Data Storage

Google BigQuery houses raw data, metadata, embeddings, and sentiment scores centrally.

Digital Advertising & Marketing Campaign

Boston Institute of Analytics is a training institute specializing in data science. In this role, I managed the digital lead generation strategy for their Mumbai branch, focusing on filling enrollment quotas for their first technical program batch.

Objectives

Developed a targeted ads marketing strategy by leveraging META ads. I optimized audience targeting, ad creatives, and budget allocation to generate qualified leads and maximize conversions.

Scope

Ads Strategy and Optimization

Visual Ad Content

Campaign Execution and Management

Analytics and Performance Optimization

Strategy

- Monitored Ad performance through key metrics (CTR, CPC, Conversion rates)
- Optimized ad placements and budget allocation for better ROI.

Result

✓ Enrollment quota fulfilled - 100%

✓ Fully booked cohort

Digital Content & Social Media

E-Cell SAKEC is a student-led nonprofit organisation promoting entrepreneurship among students. In this role, I developed and launched digital content strategies for multiple events (Project Pillar, Food Fiesta), helping to establish our organisation's digital presence and expand awareness.

Digital Content Objectives

Led end-to-end web content management, including content production, website administration, search engine optimisation (SEO), and performance tracking to drive brand awareness and engagement.

The impact.

ENGINEERING COLLEGE

HOW TO USE ZAIKA

Website Design and SEO

Inspirus Education is an overseas higher-education coaching and test-prep institute in Mumbai. I developed the company's website, ensuring it was fast, responsive and optimised for organic growth.

Objectives

Developed 9 pages on WordPress with customized themes, blogs and form integrations. I also handled technical SEO and website optimization

My Scope

Website Design

Technical SEO

Plugins integration

Website Security
